Table 7: Species changing IUCN Red List Status (2009-2010)

Published listings of a species' status may change for a variety of reasons (genuine improvement or deterioration in status; new information being available that was not known at the time of the previous assessment; taxonomic changes; corrections to mistakes made in previous assessments, etc. To help Red List users interpret the changes between the Red List updates, a summary of species that have changed category between 2009 (IUCN Red List version 2010.4) and the reasons for these changes is provided in the table below.

The 2010 categories shown in this table were first published at different times throughout the year. The IUCN Red List version that each assessment first appeared in is shown. Publication dates for each version of the Red List are: **2010.1** - 10th March 2010; **2010.2** - 29th June 2010; **2010.3** - 2nd September 2010; **2010.4** - 27th October 2010.

IUCN Red List Categories: EX - Extinct, EW - Extinct in the Wild, CR - Critically Endangered, EN - Endangered, VU - Vulnerable, LR/cd - Lower Risk/conservation dependent, NT - Near Threatened (includes LR/nt - Lower Risk/near threatened), DD - Data Deficient, LC - Least Concern (includes LR/lc - Lower Risk, least concern).

Reasons for change: G - Genuine status change (genuine improvement or deterioration in the species' status); N - Non-genuine status change (i.e., status changes due to new information, improved knowledge of the criteria, incorrect data used previously, taxonomic revision, etc.)
